- Network planner is a cutting edge WebGL based network planner in the browser, an upcoming Ekahau product first revealed at Cisco live 2022 - Las Vegas.
- Began building a new project from the ground up using web technologies including VueJS, web workers and different AWS services.
- Insights is a web based application that provides transparency across global wi-fi networks, network health visualization, automated analysis, and potential issue identification:
<https://www.ekahau.com/products/ekahau-connect/insights/>
- Developed the Ekahau Insights product together with the multinational Ekahau cloud team.
- Mentoring the team's junior software engineers.

SIEMENS

Helsinki, Finland

Software Engineer - Digital Industries

Dec 2017 - May 2021

- Built a template application and re-usable UI components with modern Angular to facilitate faster software development and to simplify starting a new customer project.
- Helped integrate new graduates and junior software engineers into the Digital Industries development team.
- Built web-based applications for Siemens' Nordic European customers (such as Orkla, Valio, Raisio Group) that provided insights into their manufacturing processes and key performance indicators.
